**Figure 1 Sensitivity Temperature Dependence**

Figure 1 shows the temperature dependence of sensitivity at 2ppm NO<sub>2</sub>. This data is taken from a typical batch of sensors.

**Figure 2 Zero Temperature Dependence**

Figure 2 shows the variation in zero output of the working electrode caused by changes in temperature, expressed as nA. This data is taken from a typical batch of sensors. Contact Alphasense for further information on zero current correction.

**Figure 3 Response from 200ppb to 0ppb NO<sub>2</sub>**

Figure 3 shows response from from 200ppb NO<sub>2</sub> to 0ppb NO<sub>2</sub>. Use of Alphasense AFE circuit reduces noise to 15ppb, with the opportunity of digital smooting to reduce noise even further. Offset voltage is due to intentional AFE circuit electronic offset.
